

Binding Constants: The Measurement of Molecular Complex Stability (Hardback)

By Kenneth A. Connors

John Wiley and Sons Ltd, United States, 1987. Hardback. Book Condition: New. 231 x 155 mm. Language: English . Brand New Book. This unique book presents a systematic review of the methods for the determination of binding constants of complex formation in solution. Collects material that has been scattered throughout the literature of several separate fields. Offered here are methods from the areas of acid--base chemistry, metal--ion coordination compounds, hydrogen--bonding, charge--transfer complexation, hydrophobic interaction, and protein--binding. Discusses the relevant thermodynamics, modelling, statistics and regression analysis, and interpretation of data. Includes fresh discussions of random association (contact complexes), selection of standard states, and comparison of results. Treats all of the experimental methods useful for measuring these equilibrium constants, including those based on spectrophotometry, nuclear magnetic resonance, reaction kinetics, potentiometry, solubility, liquid--liquid partitioning, dialysis, chromatography, fluorimetry, and many others.

Reviews

It is an awesome publication which i actually have ever read through. it had been writtern really properly and valuable. I found out this book from my i and dad recommended this pdf to discover.

This book is definitely not simple to begin on studying but quite fun to see. I actually have read and that i am sure that i will gonna read through yet again once again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.
