

Matching of Orbital Integrals on $GL(4)$ and $GSp(2)$ (Memoirs of the American Mathematical Society)

Filesize: 2.89 MB

Reviews

This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.

(Prof. Loyce Runolfsson Jr.)

MATCHING OF ORBITAL INTEGRALS ON $GL(4)$ AND $GSp(2)$ (MEMOIRS OF THE AMERICAN MATHEMATICAL SOCIETY)

American Mathematical Society, 1999. Paperback. Book Condition: New. Brand new. We distribute directly for the publisher. The trace formula is the most powerful tool currently available to establish liftings of automorphic forms, as predicted by Langlands principle of functionality. The geometric part of the trace formula consists of orbital integrals, and the lifting is based on the fundamental lemma. The latter is an identity of the relevant orbital integrals for the unit elements of the Hecke algebras. This volume concerns a proof of the fundamental lemma in the classically most interesting case of Siegel modular forms, namely the symplectic group $Sp(2)$. These orbital integrals are compared with those on $GL(4)$, twisted by the transpose inverse involution. The technique of proof is elementary. Compact elements are decomposed into their absolutely semi-simple and topologically unipotent parts also in the twisted case; a double coset decomposition of the form $H \backslash G / K$ --where H is a subgroup containing the centralizer--plays a key role.
